

Sustainability from the forest

Aside from providing the highest quality fuel and the most robust supply chain, we also ensure our pellets are from sustainable sources.

1. All of our wood pellets from UK manufacturers are made from virgin timber by-products from the sawmilling industry. This timber is coniferous (soft wood), usually FSC certified, and normally harvested within 30 miles of production.
2. During the production process the wood chip is dried using the off-cuts such as bark and branches as a fuel. This ensures that the majority of the energy used in the creation of wood pellets comes from renewable sources.
3. We collect pellets from our suppliers using vehicles that would have returned to our site empty - minimising unnecessary vehicle journeys.
4. Our transport fleet uses a biodiesel blended fuel to reduce emissions, and we always try to group deliveries together for maximum efficiency.

Greater value through quality

Wood Pellets are NOT Just Wood Pellets - Quality is the KEY to your boiler functioning correctly, meaning you should take care when selecting your fuel supplier.

Through its parent company, Edward Billington & Son Ltd, a 150 year old private family business, **Billington Biofuels** possesses unparalleled experience in procurement, handling, storage, quality control and most importantly delivery to customers.

Billingtons only handles *virgin timber pellets*. It carefully selects and audits manufacturers who can produce pellets to meet EN 14961 (A1) standards as a minimum.

A secure supply

If your business, school, or home depends on wood pellet fuel then you need assurance that the fuel will arrive. With the support, experience and financial stability from its parent company, Billington Biofuels have taken the following key steps:

1. Carefully sourced wood pellets from a number of selected wood pellet manufacturers, both within the UK and abroad. This offers you a range of alternatives even if supply from one source was disrupted.
2. Multiple sources of wood pellets means we can ensure you get the best quality available.
3. We have invested heavily in our storage capabilities and we hold a significant amount of stock to meet all anticipated orders from customers.
4. We utilise the largest fleet of specialist pneumatic blowing vehicles supplying wood pellets in the UK.

Delightful customer service

Based in our historic Liverpool offices, we have a dedicated customer service team who will work closely with you to clarify your requirements. Our team is there to ensure that your first delivery is safe, your queries are answered, and the standards you expect are maintained for every delivery.

- Extensive UK coverage for bulk deliveries.
- Fully owned distribution fleet that includes over 70 specialised pneumatic blowers, tippers and curtain siders.
- A range of vehicle sizes ranging from smaller 6 wheelers to full articulated trailers, thus giving real flexibility and control right up to delivery.
- We normally only require 2 working days' notice.
- We can agree supply contracts to cover your requirements if you wish.
- All our drivers are full time employees and extremely experienced at delivering pellets carefully and safely.
- Our knowledgeable employees can visit your site to advise on bulk storage and delivery arrangements prior to commissioning your boiler.
